Cluster Power Computing

A flexible solution to empower your business

April 2022

Cluster Power
Cloud Computing

A powerful and flexible **Infrastructure-as-a-Service (IaaS)** solution, which allows the administration of **Virtual Compute Resources in Tier 3 environment** offered by our datacenter located in Craiova.

- A model based on OPEX, with no CAPEX investments in IT infrastructure, based on a monthly subscription and **scalable** according to business needs at a given time.

- Access to **flexible resources** for IT projects, **productivity** and **critical applications**.

+ disaster recovery

Built for your
business needs

Cost Control

Quick and easy access to resources

Scalable resources

Streamlining work processes between business applications

BackUp included

Disaster Recovery Included

No additional investment in new equipment

No additional costs with IT support

Service **Benefits**

Digitalize your business at no infrastructure cost
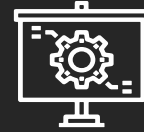

Self administration

The vCloud Director portal allows you to be in constant control of the resources you use.

Scalability

Scale down or up the computing and storage resources directly from a cloud-based portal, 24/7

Security

Benefit of disaster recovery and redundancy, while your virtual resources are constantly secured

Compute applications

Host and power AI-based applications to boost your digital journey

# How it **Works**

Create your own virtual organization through an online administration and assign multiple users with different rights. Enrich your organization with application hosting, security tools and additional resources.

NetApp Management Suite
Consistently manage and monitor your data across clouds and on the premises.
